

**Rajesh Kalloor**  
**Senior Software Engineer in Test**  
**Qubole**  
**Bangalore, India**

Dear Miss Louise Walsh,

I am extremely interested in submitting an Application with Atlassian as I have only heard great things about the company and its culture and I am enclosing a copy of my resume for your consideration.

As you will see from my Resume, I am currently working for Qubole, India as a Senior Software Engineer in Test. In my present position I am responsible for managing all quality assurance across the Development teams, this involves building new tools and frameworks to improve QA and development processes, developing high-quality test automation for a variety of feature types, mentoring developers to improve their testing, writing unit tests and conducting code reviews.

I also have good understanding of software systems in the area of parallel data processing - Hadoop, hive etc.

Prior to this I was working with Flipkart Internet Pvt Ltd (<http://flipkart.com>) as a Software Engineer in Test -2. I was responsible for managing the QA across 3 teams in Flipkart. I have worked closely with the Product and development teams on complex features spanning across multiple systems. I have experience developing Automation framework and adding new libraries as required. The framework uses Jersey Client and TestNg for API and Selenium for UI automation.

I have also brought in various processes in the team which have helped improve the quality of the product. Some of them being - enforcing deployments through Jenkins pipelines, enabling reporting for code coverage, and enforcing push to master through a JIRA record.

I have been responsible for the performance testing for the projects that I am working on. I have used tools like loader [in-house], WRK, JMeter for running the API level performance tests.

Apart from these, I have also worked on building some tools for improving the QA/dev productivity. I have worked on a mock service framework that abstracts the system from downstream failures. I have also implemented distributed tracing within the dev code-base for tracing the requests through the dependency chain.

With my proven ability to manage and maintain the highest QA standards, I feel that I would be able to make a significant contribution to your company's Quality team.

I would be grateful if you would contact me if you have any vacancies in your company, or keep my information on file in case of future openings. I would welcome hearing from you.

Yours Sincerely,  
Rajesh Kalloor
